

Effective Blend of Organic Aids to assist with respiratory related problems in young cattle

- Unique blend of organic acids with added essential Oils and Herbs.
- Specifically formulated to reduce pH levels in the environment it is introduced into thus eliminating survival of harmful bacteria, this in turn improves air quality.
- Essential product in indoor winter animal management
- Helps reduce incidence of respiratory related problems
- Essential oils and herbs - assist in raising resistance to harmful disease factors in the animal

Directions

Enviroclenz should be misted by means of an electric fogging machine or knapsack sprayer into the animal housing twice weekly during the "at risk" period.

This can be reduced to once a week as air quality improves.

Dilute one litre of Enviroclenz to 5 litres water before use.

25 litres of Enviroclenz is usually sufficient (under normal conditions) to treat building holding 100 cattle (i.e. young stock / cattle up to 18 months) over a three month period

Availability

5 litre - £54.90 (inc VAT)
25 litre - £198.90 (inc VAT)
