

# Cleansing Pessaries

*An Iodoform based pessary that can be used for Cows, Sheep and Mares.*

*To be used after routine parturition and trauma related abortion to help restore good condition to the reproductive tract.*

## Directions for Use

After calving or lambing administer pessaries as directed below:

**Cows:** Following calving or abortion: 1 - 2 pessaries  
Can also be used following caesareans—seek veterinary advice.

**Ewes:** Following lambing or abortion:  
Large breeds—1 pessary  
Hill sheep & Small Breeds—half a pessary.

This may help to restore good condition to the reproductive tract.

Should an animal become sick or injured during parturition, veterinary attention should be sought. In obstinate cases, when cleansing is not freely discharged, give a cleansing drink, and administer a pessary daily. Once cleansing has come away, another pessary may be administered.

Should the cleansing remain retained for several days or if there is evidence of infection or disease veterinary attention should be sought.

Pessaries are also suitable for use following abortion, however if the abortion is caused by infection or disease, veterinary advice must be sought before use. Administer a pessary and repeat in a weeks' time, it is advised that this administration be carried out at fortnightly intervals until a healthy condition is restored.
