

*Osmonds Electro-Aid is formulated for Oral use to help assist rehydration and electrolyte loss associated with scours in calves and pigs.*

*Electro-Aid can also be used in Sheep to help recover from pregnancy toxemia*

## Feeding Instructions

**SHEEP:** Following issues in pregnancy in sheep 160ml of undiluted product may be fed directly to the Ewe using a suitable drenching bottle. Treatment should be repeated 3-6 times daily as required, alternatively 8ml per 100ml water can be used following periods of transport or stress.

**LAMBS:** Lambs: Dilute 2ml per 100ml warm water & feed as required. Ensure clean fresh water is always available

**CALVES:** Dilute 80ml per Litre drinking water. Feed Calves 200-300ml (diluted solution). If calves are scouring remove milk for 2 days, otherwise feed as normal

**PIGS:** Dilute 80ml per Litre drinking water. Feed Piglets 200-300ml (diluted solution) Sows approx. 1 litre (diluted solution) depending on the situation. Ensure clean fresh drinking water is always available
